

SureColor SC-P6000, SC-P7000, SC-P8000 and SC-P9000

PRINT TRUE COLOUR

EPSON®
EXCEED YOUR VISION

THE STANDARD FOR PROFESSIONAL PRINTING

Epson are always striving to achieve the best possible results that professional printers can deliver. High speed, efficient, productive, reliable and easy to use, our advanced range of 24 inch and 44 inch products create prints with a quality you will never have seen before. Once you've witnessed their incredible accuracy and vivid colours, you will find it hard to settle for anything less.

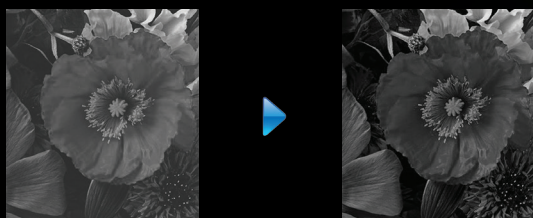

BE COLOUR CONFIDENT

When it comes to professional printing, you can't afford to look second best. Set new standards with Epson's SureColor range of large format printers which provide unrivalled colour accuracy¹ at high speeds, along with versatile media support.

ULTRA ACCURATE

The SC-P6000 (24 inch) and SC-P8000 (44 inch) use Epson UltraChrome HD 8-colour ink for highly accurate colour reproduction, while the Advanced Black and White (ABW) mode delivers high black density for deeper, richer blacks.

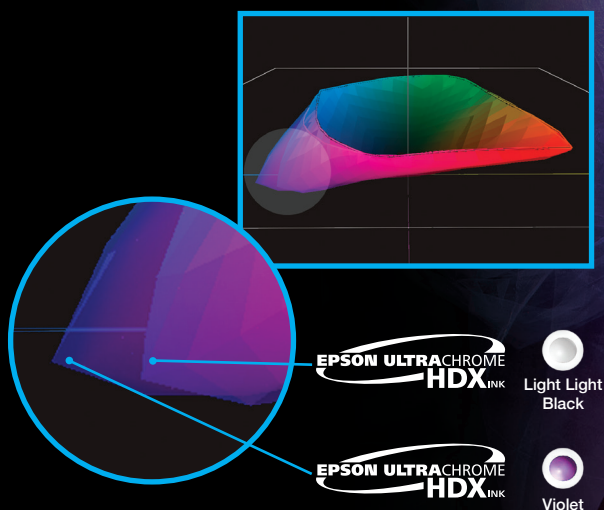

Advanced black and white mode delivers high black density for deeper, richer blacks.

WIDER COLOUR GAMUT

The SC-P7000 (24 inch) and SC-P9000 (44 inch) use Epson UltraChrome HDX 10-colour ink,² which features a revolutionary violet ink option.

Because of this, the printers achieve an incredible PANTONE[®] coverage of 99% to enable increased accuracy in all your proofing work, including the faithful reproduction of corporate colours. Fast and efficient, the SureColor range provides flawless colours that are hard to match.

Epson UltraChrome HDX ink

FINE ART AND PROFESSIONAL PHOTOGRAPHY

Professional photos and Fine Art require a superior quality of digital printing to set them further apart. The SureColor range consistently delivers your work with deeper, richer blacks and a wider range of colours.

RE-DEFINING PRINT QUALITY

The very latest technologies make the printing process smoother and more efficient, while re-defining all-important print quality. Ideal for fast delivery on a tight budget or a one-off reproduction for the gallery, our range of SureColor professional printers create fine art prints and professional photographs that pass the scrutiny of the sternest critic.

PROFESSIONAL PROOFING AND PRINTING

Our 10-colour SC-P7000 and SC-P9000 printers take professional printing to an even higher level and can be used for a range of proofing applications; from pre-press up to high-end colour proofing, such as contract and packaging.

THE CHOICE OF PROFESSIONALS

No one has more exacting standards than professional printing companies, design houses and advertising agencies. Meeting this challenge for the very highest quality, these models create long-lasting printing and proofing with the most accurate colours on the market¹.

CORE TECHNOLOGIES

Improved colour measurement

The optional ILS30 PhotoSpectrometer leads to faster and more accurate colour measurement. The colour patch size has been reduced from 15mm to 12mm which cuts down on printing time and saves paper with chart printing. The ILS30 PhotoSpectrometer supports all measurement standards M0, M1 and M2.

Automatic colour checking

The optional Spectroproofer, powered with X-Rite PhotoSpectrometer, has a time-saving on-board dryer. This clever feature automates inline proofing colour control without the need for input from highly-skilled operators.

Automatic colour correction

With the Epson Colour Calibration Utility, you can now perform colour management without the need for expensive add-ons. Using memory and a built-in sensor, this feature automatically corrects colour changes caused by time or other factors. The technology also enables automatic colour correction on any connected SureColor SC-P printer in your network.

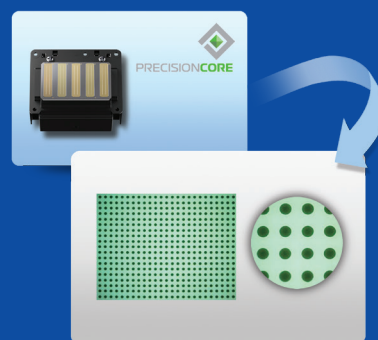

Optional Spectroproofer powered with X-Rite PhotoSpectrometer

PrecisionCore Technology

The Epson PrecisionCore TFP printhead has 360 micro-fine nozzles for each colour, delivering perfectly accurate dot shapes with virtually no misting or satellites. Improved printing speed leads to an increase in productivity as well as quality.

Perfectly accurate dot shapes with Epson PrecisionCore Technology

TRUE COLOUR

Improved ink quality

The SC-P7000 and SC-P9000 models utilise Epson UltraChrome HDX 10-colour ink – with its violet option, the colour gamut increases to an impressive 99% of PANTONE®. This allows these models to create the most accurate colours on the market¹.

Epson LUT technology

Our LUT (look-up table) technology improves ink efficiency by seamlessly integrating hi-fidelity ink primaries, resulting in a smooth and seamless transition between colours. This ensures all your prints look exactly the same under any light conditions.

Bronzing reduction

The high-quality ink used in our SureColor range of professional printers evens out the difference of glossiness among colours. This significantly reduces the graininess previously seen on skin tones by optimising the fine colour dispersion in each pixel.

Advanced Epson LUT technology enables accurate reproduction of color tonalities regardless of image composition or media.

SEE THE SURECOLOR BENEFIT

Lasting quality

Your photography and fine art will retain its high quality for around 60 years³ on premium glossy photo paper. This extra lease of life results from increasing the grain diameter of the yellow ink, the colour most vulnerable to UV damage.

Easy operation

With an enhanced 2.7 inch colour LCD control panel for clear navigation and front access to media and cartridges, our SureColor printers have been designed for quick and easy use. More time is saved by spindle-less media roll holder that results from the flange-type media roll holder.

Reduced wastage

Further efficiency comes from enabling prints from HDD, using the machine's operation panel. Print one sheet, check it and then if everything is to your satisfaction, continue the run without having to return to your PC. This not only cuts down on printing time but also reduces the wastage caused when a large print run does not meet your expectations.
